Adjust the pressure to your preference

# AIR JUMP SET

The AirJump set is our most multi-purpose training equipment. It's a complete training station ideal for gyms and especially primary schools. With strong Velcro strips, all individual parts can be positioned and connected to create a soft vault box, stairs, incline, jumping pad and more! Ideal for a large variety of exercises.

Thanks to the soft and bouncy surface, children will be able to learn new skills more easily. At the same time, teachers and trainers are better off setting up this light weight AirJump set instead of setting up conventional equipment.

The complete AirJump set comes in three transport bags which fit in any car and storage. It's easy to take along and easy to set up within five minutes.
