

MODULAR TODDLER POOL

The variety of elements, Aqua Drolics offers for creating a toddler pool, makes it possible to choose your own shape and dimension of the pool. The elements are available as a standard in three styles: Coloured, Jungle and Farm. Below you can see the various elements in the different styles to help you design your own unique toddler pool.

The toddler pool will be installed by Aqua Drolics specialists, as this is quite complex. The elements will be placed directly on the existing floor. The floor of the pool will be laminated on the elements to make it watertight. The standard water depth of the pool is 22 centimeters (8.7 inches).

The advantages

- ✂ The elements are manufactured from high-quality Glass Fiber Reinforced Polyester (GRP) which is: very strong, UV and scratch resistant;
- ✂ The bright colours attract children and make them want to jump right in;
- ✂ While the children are playing, the parents can sit and relax at the edge or at the side of the pool;
- ✂ The preparations are compared to other bathing systems relatively easy.
