BBW2015 Ball Cleaner

The most powerful, effective and mobile solution on the market

BBW2015 Ball Cleaner

The most powerful, effective and mobile solution on the market

Annexe D of BS 8409 is the British Standard Code of practice for Indoor Play Areas, and together with RoSPA they recommend regular cleaning and disinfecting of playpen balls. Thanks to the **Ballpool BBW2105** system, it provides the fastest and most efficient solution on the market today. In fact research by the faculty of Chemistry, Environment and Technics of IJselland University, have concluded that using the Van Veen design, the balls benefit a reduction of 75% of bacteria without even using any cleanser or disinfecting fluid. Further independent biological and antibacterial tests prove that this method eliminates more than 95% of bacteria including E. coli and MRSA, viruses and fungi.

The BBW2015 latest model updates:

- Chassis increased from 100cm to 115cm for better ergonomics
- Addition of safety cut-outs for both suction and wash units
- Relocation of suction unit power socket for less liable damage
- Overall weight reduction down to just now 60Kg
- Elimination of tablets to more efficient liquid detergent
- Addition of extended 3 year warranty with registration of unit

This state-of-the-art machine has evolved over 25 years since its launch in 1994 and has been purpose built to address the problems involved in cleaning children's ball pools.

The BBW2015 sanitisation system is a powerful, effective and mobile solution suitable for any size of play area, large or small.

Advantages

- Able to clean up to 15,000 balls per hour
- Capable of bagging up to 50,000 balls per hour
- Designed to fit through a standard doorway
- Lightweight and mobile
- Built to Industrial standards for better reliability and endurance
- Unique ball sanitation system
- Supplied with a 5.0m hose, 25 netsacks, 2 towels and detergent
- Standard brushes suitable for 75mm balls but 60mm or 80mm also available
